

FRIED PHISH

Catching Online Scams Before They Catch You

SCAMMERS ARE GETTING BETTER,
SO DID OUR PROTECTION

The Problem

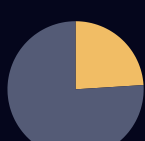

73%

of Americans have fallen
victim to online scams

29%

have had their
accounts **hacked**

24%

gave away personal
info **unknowingly**

1/3

of Americans are
scammed **every year**

The Solution

Fried Phish is an AI-powered browser extension that scans in real-time for scam emails, texts, and links — alerting users before their security is compromised

How It Works

SCAN

Fried Phish checks
links, messages, and
emails in real time

DETECT

AI compares content
to a massive scam
database

ALERT

Warns users with
color coded popups

- Suspicious
- Dangerous

Customization & Privacy

- Customize which sources are trusted and blocked
- Privacy First: No data sold
- User Feedback: Report false positives/negatives to improve our digital net

What Separates Us from Others

Unlike standalone apps like Norton Genie, Fried Phish integrates directly with your browser, social media, and messaging apps.

- Works across Gmail, Discord, Facebook, and many more
- Instant detection, no copy-pasting links
